Provo Bicycle Collective's New Bike Owner's Guide

1. Lock Your Bike!
   - Always lock your frame!
   - Best: Inside
   - Good: Covered
   - OK: Uncovered

And your wheels!

Avoid common mistakes such as locking only the wheel, or locking to an object the lock can slip over the top of.

2. Keep Your Tires Inflated to the Recommended Pressure!
   - It's printed on the side of your tire.
   - 55PSI - 85PSI (3.8bar - 5.8bar)

If you don't own a pump with a gauge, drop by the collective every week or two to top up! (Pressure too low and you risk getting pinch-flats on pot holes)

3. Clean & Lubricate Chain Often!
   - How often? It depends, but every 2-3 weeks is probably good.
   - This is a solvent.
   - It UN-lubricates. Use it to clean the gunk and oil off your chain and gears.

This is a lubricant, use it lightly on your chain after you clean it.

Happy riding!
